

CEDAR RIVER WATER & SEWER DISTRICT WATER SERVICE LINE  
REPAIR AND REPLACEMENT **REQUIREMENTS** AND RECOMENDATIONS

Customer water service lines develop leaks and can go bad over time. Older and improperly installed lines can develop problems. Here are the **requirements**, and a few recommendations:

**Requirements:**

- **Cedar River Water and Sewer District requires the connection to the meter setter be made either by District personnel or a licensed plumber. In the event that you choose to have it done by your plumber, the District requires the connection to the setter remain exposed until inspected by District personnel.** There is no fee for the District to make the connection, or inspect the connection made by your plumber.
- **Caution must be used when working around, or connecting to, the setter. Never remove the meter or bend the setter.** The connection point is labeled in the picture above. **Any damage to district property will result in a tampering fee of \$100 plus the cost to replace any damaged equipment.**
- The connection to the setter must be polyethylene SDR7 1" iron pipe size with a 200 or 250 PSI rating labeled on the pipe, or cross-linked polyethylene 1" copper tube size 200 PSI rated. Brass fittings are required for all connections to the setter, if brass insert fitting is used, clamps must be worm-drive stainless steel. Galvanized, steel, plastic, or nylon fittings are not allowed.
- 24 hour notice is required for District crew to make the connection or inspection. Hours for this service are between 9AM and 3PM Monday through Friday, excluding holidays.

**Recommendations:**

- **We strongly recommend you use polyethylene SDR7 1" iron pipe size pipe, 200-250 PSI rated.**
- The new service line should be buried at a depth of 24", and should be bedded in sand, both over and under the new service line.
- We recommended you install a new shut off valve at your house when you replace the service line.
- It is also a good idea to buy a meter shut off key for shut off emergencies.

**Before you dig, call for a utility locate first!**
